Figure 1. A schematic diagram illustrating the experimental design. The figure shows a sequence of events starting from "Random assignment to treatment groups". This leads to two parallel paths: one for the "Control group" and another for the "Treatment group". Both groups undergo a "Baseline assessment" and a "Post-treatment assessment". The "Treatment group" also receives an intervention between the baseline and post-treatment assessments. The final outcome is measured at the "Post-treatment assessment".
